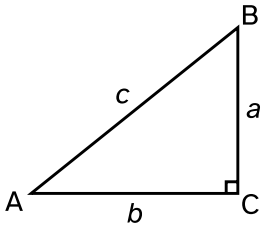
Instructions.

- Answer the following questions.
- You have 1 hour to complete the exam.
- Write your answers on the exam paper.

Question #1. (20 points). Solve for c, with $a = 62$ and $b = 75$.



Question #2. (15 points). A bag has 69 blue balls, 83 yellow balls, and 5 red balls. How many random balls must be drawn from the bag to ensure that at least one yellow ball is drawn?

Question #3. (35 points). For the function:

$$f(x) = x^5 + \sin(x^2) - \ln(x)e^x + 79$$

find the derivative.

Question #4. (20 points). Four cars travel at different speeds:

- The red car travels 191 miles in 90 minutes.
- The blue car travels 230 miles in 52 minutes.
- The yellow car travels 42 miles in 94 minutes.
- The green car travels 188 miles in 73 minutes.

Which car travels the fastest?

Question #5. (10 points). In the following table of polygons, one is missing. Which is it?

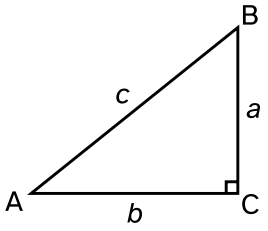
Instructions.

- Answer the following questions.
- You have 1 hour to complete the exam.
- Write your answers on the exam paper.

Question #1. (20 points). Solve for c, with $a = 87$ and $b = 4$.



Question #2. (15 points). A bag has 89 blue balls, 32 yellow balls, and 26 red balls. How many random balls must be drawn from the bag to ensure that at least one blue ball is drawn?

Question #3. (35 points). For the function:

$$f(x) = x^6 + \sin(x^2) - \ln(x)e^x + 17$$

find the derivative.

Question #4. (20 points). Four cars travel at different speeds:

- The red car travels 264 miles in 61 minutes.
- The blue car travels 24 miles in 24 minutes.
- The yellow car travels 166 miles in 29 minutes.
- The green car travels 57 miles in 75 minutes.

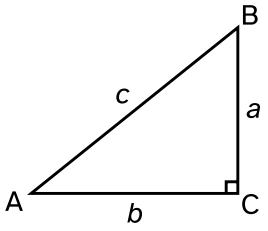
- Answer the following questions.
- You have 1 hour to complete the exam.
- Write your answers on the exam paper.

Question #1. (20 points). Solve for c, with $a = 37$ and $b = 59$.



Question #2. (15 points). A bag has 49 blue balls, 71 yellow balls, and 47 red balls. How many random balls must be drawn from the bag to ensure that at least one red ball is drawn?

Question #3. (35 points). For the function:

$$f(x) = x^3 + \sin(x^2) - \ln(x)e^x + 65$$

find the derivative.

Question #4. (20 points). Four cars travel at different speeds:

- The red car travels 119 miles in 46 minutes.
- The blue car travels 183 miles in 47 minutes.
- The yellow car travels 283 miles in 62 minutes.
- The green car travels 209 miles in 52 minutes.
